NEWS RELEASE

URANIUM INTERNATIONAL CORP. ENTERS LETTER AGREEMENT TO PURCHASE THIRTEEN EXPLORATION LICENCES COVERING EIGHT URANIUM DEPOSITS IN SWEDEN

DENVER, CO,- April 30, 2009 - Uranium International Corp. ("Uranium International") (OTCBB: URNI) has entered a Letter Agreement to purchase a total of thirteen exploration licences covering eight uranium deposits held by Continental Precious Minerals Ltd. ("Continental") in Sweden. Continental is a Canadian public company listed on the Toronto Stock Exchange. The Letter Agreement is subject to due diligence review by Uranium International (to be completed by August 30, 2009). Upon Uranium International being satisfied with the results of its due diligence, the Letter Agreement is to close on August 31, 2009.

The thirteen exploration licences cover seven drilled uranium deposits and one property containing an uranium occurrence as detailed in the National Instrument 43-101 compliant technical report issued by Telluride & Associates on the properties in July 2005 and restated in September 2005. The licences encompass a total area of 583.95 hectares in the northern half of Sweden, south of the Arctic Circle. The entire group is comprised of the Skuppesavon, Guorbavare, Kvarnån, Björkråmyran, Abborvikken, Lilljuthatten, Nöjdfjället, and Sågtjärn licences.

There are five recognized categories that describe the earliest stages of exploration to the highest level regarding underground resources. Inferred resources are the first level of quantifiable exploration and are still considered speculative geologically to have economic considerations applied to them. Inferred resources require further exploration to upgrade them to the higher measured and indicated categories. Indicated resources are resources from which the quantity and grade and/or quality are computed from information similar to that used for measured resources, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance is high enough to assume continuity between point of observation.

The Letter Agreement calls for an initial cash payment of US \$25,000 to be made by Uranium International to Continental on signing of the Letter Agreement (which has been paid).

Subject to the completion of due diligence satisfactory to Uranium International (which is to be completed no later than August 30, 2009), the Letter Agreement

is to have an initial closing on August 31, 2009 (the “**Initial Closing**”) at which time Uranium International is to:

- (a) make a cash payment of US \$7.5 million;
- (b) issue and deliver 6,000,000 common shares of Uranium International (subject to a one year re-sale restriction); and
- (c) issue and deliver warrants exercisable to purchase up to 1,000,000 common shares of Uranium International at the price of US\$1.00 per share for a period of two years from the date of issuance.

At the first anniversary of the Initial Closing (the “**Final Closing**”) Uranium International is to make a further payment of US \$7.5 million and Continental is to transfer to International Uranium title to thirteen exploration licences.

Telluride & Associates of Hertfordshire, England prepared a National Instrument 43-101 Technical Report dated July 15th, 2005 and revised September 20, 2005. That report contained a National Instrument 43-101 compliant resource estimate (this report can be viewed in SEDAR under the Continental company profile).

Telluride & Associates generated CIM indicated resources at four of the deposits from the available inferred resource sectional data and, after review, has accepted two historical, geostatistically based estimates at the Pleutajokk and Lilljuthatten deposits as being equivalent to CIM indicated resources. The inferred resources at Sågtjärn are underdrilled and are not considered suitable as a whole for indicated resource status.

The following table sets forth Telluride & Associates resource estimate at the properties as at July 15, 2005:

Continental Swedish Uranium Resource Estimates, as at July 15, 2005.

Bertrand Taquet, P Geo, the Senior Geologist of International Uranium, and a qualified person under NI-43 101, used the above resource estimates to calculate the total inferred uranium (U308) on the above listed deposits as 3,290 tonnes or 7.2 million pounds and total indicated uranium (U308) as 6,044 tonnes or 13.3 million pounds.

International Uranium will be preparing and SEDAR filing an updated National Instrument 43-101 Report within 45 days of this news release.
